

NATIONAL AND INTERNATIONAL

A trusted name for over 25 years.

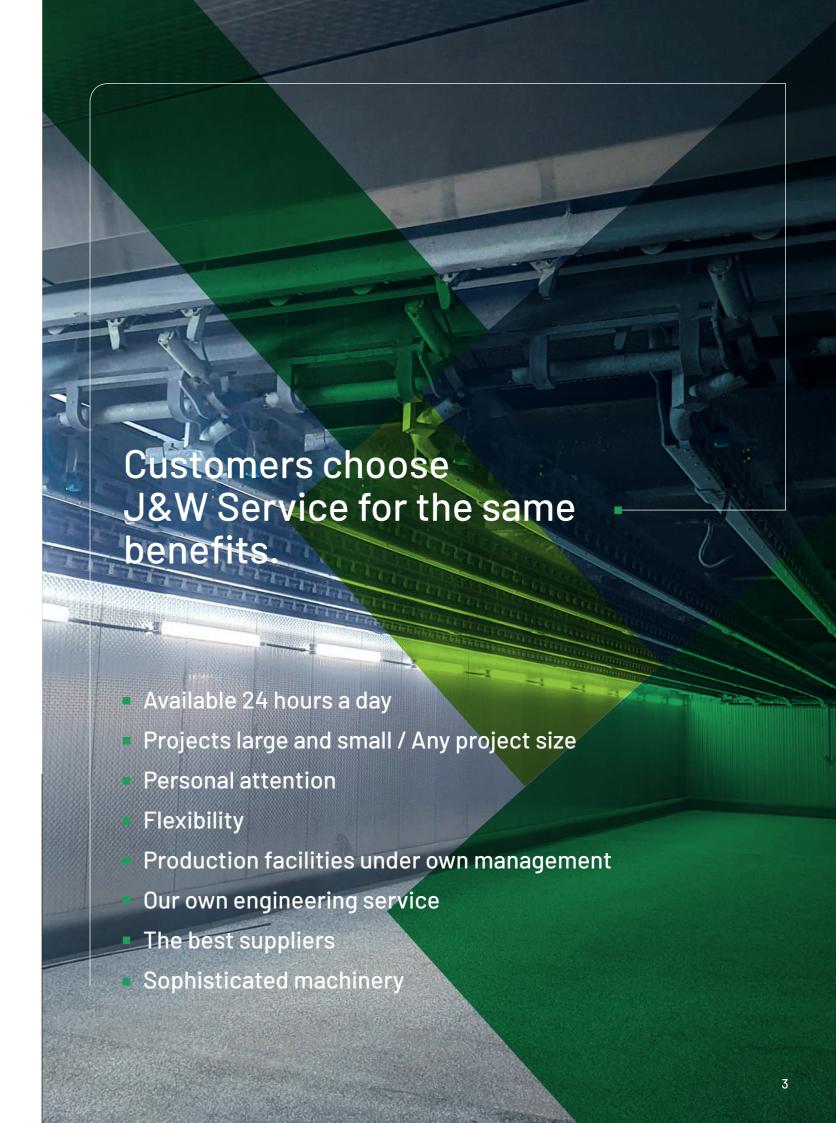

As a slaughterhouse, you are always looking for ways to complete processes faster, smarter and more efficiently. When it comes to the construction and furnishing of slaughter lines and dissecting rooms and the supply of chillers and freezers, J&W Service has been a frontrunner in the Netherlands for over 25 years. We have also enjoyed a reliable reputation internationally for years now. For example, we are active in Belgium, Germany, Ireland, Portugal, Serbia, Switzerland, France and the Netherlands Antilles (Curaçao, Saba).

SMARTLY LAID OUT SLAUGHTER LINES AND DISSECTING ROOMS

For the best possible flow.

With J&W Service as a partner, you will notice from the very start that we keep the lines very short. In fact, we always visit your slaughterhouse first, without exception. A pleasant way of working, not only because of the personal approach. Even after 25 years, it is still the best way for us to arrive at advice that seamlessly matches your wishes and is also future-proof and flexible. For the layout of a dissecting room or the construction of a slaughter line, we apply the same quality as the global market. Quality is not an issue for us. In our opinion, it must be of the highest level.

We do look at the flow.

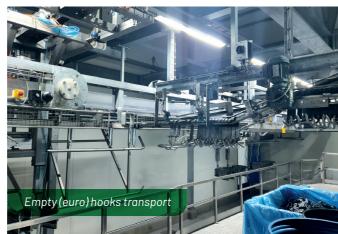

For the best possible production capacity and efficiency, we always map out the flow first. Many slaughterhouses still only work with conveyor belts. A one-sided solution that does not

meet expectations in the long run and is therefore also not future-proof.

We are happy to visit you in person. You can make an appointment at **www.jwservice.nl**

We build dissecting rooms for up to 700 carcasses per hour.

AUTOMATED CHILLERS AND FREEZERS

Maximum labour savings thanks to track & trace system.

We supply engineering, production, assembly, automation, overhaul and maintenance of technical systems for cattle, pigs, goats and sheep.

Thanks to our track & trace system, you know exactly which meat is delivered to you, which farmer supplies it and when.

You can 'retrieve' it separately via a touchscreen screen. The chillers and freezers are maintenance-free; steel track structures provided with plastic in any shape, for example, require little lubrication and the fully automated process means lighting is no longer necessary.

J&W Service **Driven** and **motivated** by craftsmanship.

J&W Service was founded in 1998 by R. Janssen and R. Wittebroek. Driven and motivated by craftsmanship, the company has built up a reliable reputation, at home and abroad.

The world of J&W Service...
